# CLB-Paper
Signature Data Tests

Size test

Draw along the lines of the 25mm square.

Pen strokes that gwithin the square are acceptable, but none should go outside.
The time taken to complete the square is not important.

Timing test

Use a timer to write/draw within this field for 10 seconds.

The time from the first pen-down to the last pen-up should be as close to 10s as possible.
The number of strokes and their shapes do not matter.

Non-signature field tests

Write/draw anything in both the boxes below.

This is used to check that non-signature ink is not converted to FSS format.

Handwriting

Here is some test data. This should be transformed into text. Magic!

Annotation
